

BOREHOLE MICROMETER

borehole diameter inspection tool

APPLICATIONS

Our all-new micrometer is a mechanical device used to measure the diameter of a roof bolt hole along its length. The standard unit has a measurement range of 25mm to 55mm and can be inserted up to a depth of 3 metres from the borehole opening. A 30mm to 60mm range version is also available. With engraved gradations on the handle and a smooth pull-to-measure mechanism, measuring a borehole diameter has never been easier.

FEATURES

- Stainless steel body
- Replaceable brass slider
- Replaceable jaws
- Highly flexible cable
- Mine-tested for robustness
- Millimetre gradations on both sides of handle
- Includes calibration ring and tools
- Robust padded carry case
